

Youth Urological Treatment Centre

Drug Abuse Causes Frequent Urination

Seek Medical Help Without Hesitation

Frequent Urination

Painful Urination

Urinary Incontinence

Drug abuse can damage your urinary bladder resulting in permanent loss of its storage function and continence. If you have any urinary symptoms which may be associated with drug abuse, please seek immediate help from the Youth Urological Treatment Centre (YUTC) of Prince of Wales Hospital by calling our hotline at **2632 3773**.

We welcome teenagers to make appointments to seek medical advice at YUTC on their own.

The establishment of Youth Urological Treatment Centre was sponsored by the Beat Drugs Fund
